Attendees: Morty, Willem, Daniël, Lucas

- Everyone has passed meaningful MR, except Luca.
- Morty is doing background colour and reordering boxes, but adding lists was broken, so this wasn't possible.
- Make sure when merging that the branches still work
- HCI report draft deadline this week.
- Group 71 will do the HCI report on our product, we will do the report on their product.
- Minimum application is done.
- We don't have an end goal for our product, we will keep working at our current pace, and see where we end up.
- We have to make a prototype, on how we want the ui to eventually look.
- Handle MR's quicker, send the link for the MR's in the group chat.
- Thursday at the latest, send classes to TA where examples of rubric requirements (rubric sent in the mattermost chat) can be seen.
- Implement websockets yourself, if your issue involves logic that should be updated on a different client.
